RECLAMATION IS HAWAII'S NEED

Governor Frear Says It Will
Bring in the Best of
Immigration.

Governor Frear believes that the extension of the reclamation system to the Territory of Hawaii by the Federal government will be about the only means which will lead to the establishing in the Islands of any considerable community of American farmers. In speaking of the problems that confronted those interested in securing immigration that will mean the strengthening of the citizen population of the Territory, the Governor stated that the bringing of American farmers to the Islands could be successfully accomplished by the opening of large tracts of land at one time, and that this could only be obtained through the extension of the reclamation system.

An idea of "model farming communities" in Hawaii is gaining considerable prominence in the publications on the mainland. Referring to the Haiku land exchange the National Finance Magazine of Chicago has the following to say:

"The Territory of Hawaii is preparing to establish a model farming community. Governor Walter F. Frear, who has been the moving spirit in the project, has been working it into shape for nearly a year past, and has now brought it to the point where the selection of the people to develop the land is the next step. There will be openings provided for about fifty families in the first project, and the amount of land that will be divided among them will be about 1800 acres or about 30 to 40 acres each.

"A word of explanation just at this point may be enlightening to many. Although Hawaii is and has been for many years, an agricultural country, almost all the capital and energy has been centered until very recently, in the production of sugar. This one production has been developed to a very high degree of perfection and most of the land suitable for culture has been brought into use. Aside from rice and taro, grown on marsh lands by Chinese and native Hawaiians, practically the only attempts in diversified agriculture were left to Chinese and Japanese, and prosecuted in the most primitive and desultory fashion. A large percentage of the food stuffs used in the Territory is up to the present time brought in from the mainland, and amounts to something over \$3,000,000 annually. Not only does this include most of the garden and field vegetables, but practically all the pork products and poultry and eggs used, and even citrus fruits to the value of some \$50,000 a year. The indifferent results obtained in this line of agriculture by the Orientals led to the popular belief that the climate or soil of the island is not adapted to growing anything but sugar. In less than ten years this theory has been exploded; first by the wonderful success attained in the growing of pineapples within this period, and again by the demonstrations of the United States agricultural experiment station, which has been doing splendid work since the time of annexation. Only a small part of the arable land of the Territory is adapted to sugar culture and this, being largely the lower coast lands, is the least desirable as a place of residence for white people. The Territory is now, however, awakening to the importance of a large citizen population of small land owners rather than a few large estates, which the sugar business has tended to develop. The present territorial administration is thoroughly imbued with this idea and has the strongest support from the Federal administration. Secretary Garfield, of the department of the interior, chief of the reclamation service Frederick H. Newell, and other government officials have visited the Territory during the past year and have thoroughly studied conditions, and are lending their fullest support to the plans just mentioned.

"The land now to be opened is located on the island of Maui, and in one of the most delightful parts of any in the group. The section has proved to be one of the most productive in the islands for pineapple culture. It is between ten and twelve miles from the seaport of Kahului, and a railroad extends from the latter point to within about four miles of the district and will doubtless be continued the intervening distance within the next year. A perfect macadam road at the present time enables a number of auto-trucks to carry the product of the large pineapple canning factory almost as economical as could be done by railroad. The tract has an elevation of about one thousand feet above the sea and from aesthetic and hygienic standpoint, the location could scarcely be excelled anywhere in the world.

"The Territory wants to encourage a good class of American farmers and fruit growers to come to the Islands. As fast as practicable it is intended to subdivide and throw open new tracts and there is every reason to believe that many hundreds of American families will be thus enabled to enjoy life under ideal conditions.

"Hawaii has something like a million and a half acres of public land, out of a total of over four million. Over half of this comprises absolute barren mountain peaks and ancient lava fields and can never be utilized for agricultural purposes. Of the remainder, however, there are about a quarter of a million acres which will no doubt be brought under high cultivation in course of time.

"The spirit of some of the large corporations owning great areas of valuable lands much of which is not under cultivation, is decidedly gratifying and indicates the great probability of these big private estates being eventually broken up."

Buckhead CHLORIDE

LITHIA

WATER

Buckhead Springs, Centralia, Virginia. Chesterfield County.

IN CASES OF 50 QUARTS.

NO. 38055

Richmond, Va., August 12, 1904.

COMPLETE ANALYSIS OF MINERAL WATER FROM BUCKHEAD
SPRINGS, MARKED "BUCKHEAD LITHIA WATER."

The water contains per U. S. gallon of 231 cubic inches:—

Calcium Carbonate	0.14583 grains
Magnesium Carbonate02016 "
Barium Carbonate00175 "
Iron (ferrous) Carbonate01304 "
Manganese Carbonate00104 "
Calcium Chloride09216 "
Magnesium Chloride61485 "
Sodium Chloride06708 "
Potassium Chloride21116 "
Lithium Chloride00097 "
Potassium Sulphate07408 "
Sodium Nitrate67668 "
Sodium Phosphate00101 "
Sodium Arsenate	faint traces
Silica43751 "
Alumina05853 "
Carbonic Acid combined with Mono-carbonates to form Bicarbonates	2.41565 "
Free Carbonic Acid Gas08044 "
Total Solids	2.49609 "
Free Carbonic Acid Gas	3.41 cubic in.

The above analysis shows the water to be **EXTREMELY LIGHT AND PURE**, and its freedom from organic matter and consequent excellent keeping qualities, make it a most desirable table water. As a mineral water, its lightness will enable it to be **RETAINED ON THE MOST DELICATE STOMACH**, and we believe that when freely used, it will be found to possess decided therapeutic value, since the potent ingredients present are free from lime and other inert salts. We would expect good results from its use in case of gout, rheumatism and stomach troubles, as well as diseases of a serofulous character.

Respectfully,

FROEHLING & ROBERTSON,

Analytical and Consulting Chemists.

REGAL SHOES
FOR WOMEN

NEW FANCIES IN
HIGH ART FOOTWEAR

We have just received the newest Paris and New York creations in ladies' fashionable footwear made in the famous Regal quality. These styles are striking and more dressy than any that has ever been shown in Honolulu.

This beautiful tan button boot, with tan suede upper, is an example of one of the newest models. Perfect fitting around the ankles and over the instep, with dainty, slender, curved toe and short vamp.

To appreciate fully the beauty of this shoe you should come in and try on a pair. It is a pleasure for us to show such beautiful goods. Price, special custom bench made, \$5.00 a pair.
